1. Start no Apache e MySQL, no painel de controle do XAMPP.
2. Importar base de dados seaker.sql (está na pasta BD no GitHub) no phpmyadmin:

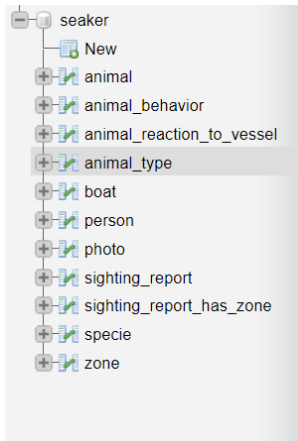

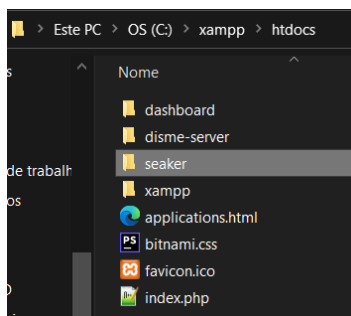

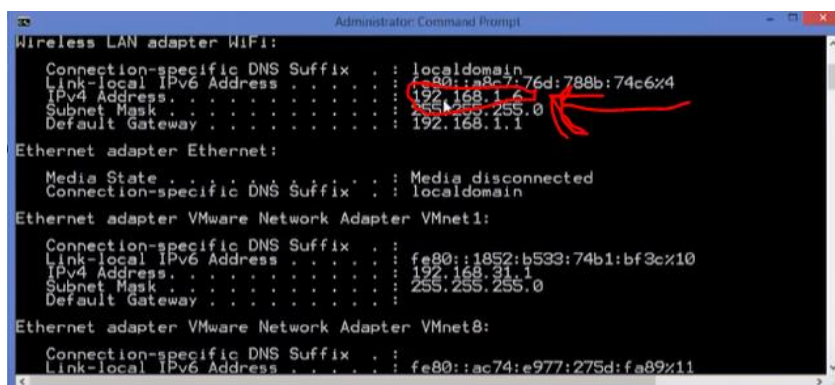

Tabela animal_type está assim:

3. Copiar pasta seaker (está na pasta BD no GitHub) para dentro da pasta htdocs do xampp:

4. Executar comando ipconfig na linha de comandos para saber ip do pc:

5. Escrever o ip no URL (MainActivity.java):

```java
public void inserirtipoanimal(String name) {
    Log.d( tag: "myTag",  msg: "This is my message");
    String login_url = "http://192.168.1.6/seaker/inserirtipoanimal.php";
    try {
        URL url = new URL(login_url);
        HttpURLConnection httpURLConnection = (HttpURLConnection)url.openConnection()
```

6. Fazer Run do projeto no Android Studio

7. Inserir tipo de animal:

8. Submit Data

9. Fazer refresh no phpmyadmin, e verificar se inseriu o tipo de animal:

10. Apagar ip do url
